YOUR message -we are seeing the "violence of creation".. the birth of a new system- like all births is painful and frankly, --ugly. computers,i.e. speed complexity, and breadth, helped cause this, and MUST be an integral part of the new global "Financial Organism" as contrasted with the financial SYSTEM. Sophia's type of life . - email , chat, video iphone,, vs Kissenger.. constipation, cholesterol,WSJ editorials. etc.. The political machines realized this, early, the financial, not yet..Banks, need to rethink their traditional role. there is no need for them to "protect your money". example. The irs spent huge sums re the , printing , mailing and delivering of checks to millions. who then had to travel to their local banks to deposit the checks -they simply could have credited the phone acct of 23 million people with the push of a button.. Paul volcker could have pushed the button if it made the establishment more comfortable. TRAVEL SAFE
